

Independent Cancer Patients' Voice (ICPV) is a patient advocate group **led by patients for patients**.

We bring the views and experience of cancer patients, their families and carers, to the cancer research community. We believe that clinical research and practice will benefit more patients more quickly if people affected by cancer are **partners with clinicians and healthcare professionals, rather than passive recipients of healthcare**.

This poster shows *some* of the clinical trials, research studies, programmes and work to which we have contributed.

Programmes, Projects and Other Work

SWEET

Improving outcomes for women diagnosed with early breast cancer through adherence to adjuvant endocrine therapy

SYSTEMS 2

A Randomised Phase II trial of standard versus dose escalated radiotherapy in the treatment of pain in malignant pleural mesothelioma

CORE A

Trial looking at SBRT for breast, prostate and non small cell lung cancer.

KORTUC

Intra-tumoural Hydrogen Peroxide as a Radiation Sensitizer in Patients With Locally Metastatic Breast Cancer

eat-CIT

Web-based resource for cancer self-manage eating difficulties during Chemotherapy and/or Immunotherapy

CANCER IN PRISONS

The first-ever study of incidence, prevalence, experiences and outcomes in English prisons

CHALLENGE UK

The Colon Health and Life Long Exercise Change Trial

EMPRESS

Cancer Diagnosis via Emergency Presentation Study core information for colorectal cancer surgery

Support in Primary Care for those living with/beyond cancer

Radiotherapy trial in anal cancer

Ex-Vivo Drug Screening of Patient Tumour Biopsies

About UK screening programmes

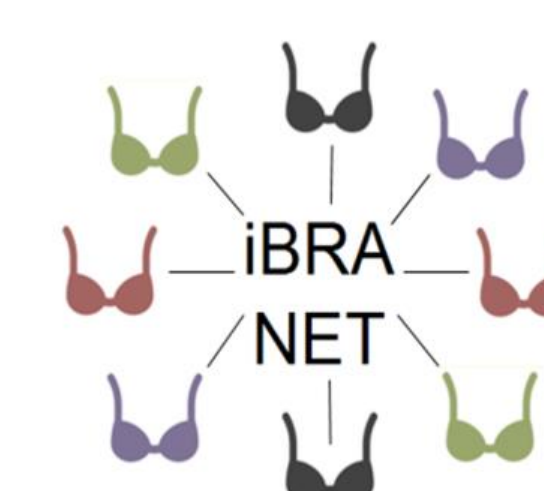

Phase II randomised study palbociclib with/without AI

CONCORDE-A

Phase 1B study of novel agents in combination with conventional radiotherapy in non small cell lung cancer.

CANDO 3

A multicentre observational cohort study of women diagnosed with EBC with chemotherapy. Do Fat Mass(FM) and Fat Free Mass(FFM) influence complication

ASSESS-meso

Pain in Malignant Pleural Mesothelioma: Can we identify those at 'high risk' of developing complex pain?

NEPTUNE

Enhancement of immuNothErapy combining avelumab and repeat doses of radiUm-223 in ER+ve, HER2-ve metastatic breast caNcEr

SHUNBURN

Evaluation of the clinical- and cost-effectiveness of a brief school-based intervention to reduce sunburn in adolescence

STRATIFY

Staging by Thoracoscopy In potentially radically Treatable Non-Small Cell Lung Cancer Associated with Minimal Pleural Effusion

ADSCAN

Accelerated, dose escalated, sequential chemoradiotherapy in non small cell lung cancer.

Continuing to speak clearly and to be heard widely
